NRC # 1242283, 1242284, 1242466 and 1242487 Pipeline Break, Nashville International Airport, Nashville, Tennessee

A drill rig struck a gas pipeline that services the Nashville International Airport and greater Nashville area. Please see previous ERNS Reports for history of this multi-day incident. **UPDATE:** The Colonial Pipeline break at the Nashville International Airport is changing from emergency response to consequence management. Other than oil potentially weeping into McCrory Creek, no off-Site impacts remain. The intercept trenches are deep, long and effective. Steve, Jordan, and START resources demobed, as did the Unified Command and ICS Structure. Colonial response resources remain. The Site was buttoned down for the storm - Steve and one START will return Monday and map out a longer Response posture with recovery objectives and timelines.
For further information please refer to the website at https://response.epa.gov/NIAgasline or contact Steve Spurlin.

Response Personnel Status
Duty Officer waning: OSC Rick Jardine
R1:   OSC Jordan Garrard   Responding
R2:   OSC Brian Englert   Available
